

ELE COMPRESSION MACHINE

One of main factors to ensure top notch quality for our clients is using the latest technologies in the market.

We save no effort in testing & measuring the properties or performance of products. At POLY GROUP we settle for no less than perfection that's why we choose the ELE compression machine.

Using cutting edge technology.

Most testing errors produce lower strength results. Noncompliant loading rates can generate errors in measured strength.

The user interface includes real-time display of load vs. time, further ensuring accurate & consistent test results & providing "goodness of test" data to improve traceability in your QC operations.

Our complete technical know-how have helped us to proliferate extensively in our business activities.

We stand resolute on our principles of loyalty & veracity, for which we have achieved high credibility in the industry.

Client satisfaction is our foremost focus and we make meticulous efforts to fulfill their diverse needs & requirements.

Our professionals are well-versed in their respective domain & ensure that the orders are completed within the stipulated time frame. Owing to all these factors, we have been consistently moving ahead of our market contenders & have been effectively serving our renowned clients.
